EDUCATION

University of Southern California, Viterbi School of Engineering, **May 2027,** *Los Angeles, California*
B.S. in Computer Engineering & Computer Science (CECS) and M.S. in Computer Science (PDP) **GPA: 3.76**

Academic Honors: Presidential Merit Scholarship recipient (merit aid totaling \$240k), 4x Viterbi Dean's List Scholar.

Coursework & Skills: Data Structures & Algorithms, Object-Oriented Design, Discrete Mathematics, Probability Theory, Internetworking, Multi-Threaded Programming, Machine Learning, C++, Java, Python, JavaScript, SQL, Linux. Docker.

PROFESSIONAL EXPERIENCE

Software Engineering Intern, **Microsoft,** **May 2025 - August 2025,** *Seattle, Washington*

- Architected and scaled a modular framework for multi-agent AI systems, reducing on-call task resolution time by 70%.
- Developed a comprehensive unit-testing framework for agents; integrated an MCP (Model Context Protocol) interface.
- Engineered a crucial diagnostic automation ensuring 100% availability of high-priority server farm failover processes.
- Delivered production C# code on the network pipeline serving 4 trillion+ requests daily across OneDrive/SharePoint.

Software Engineering Intern, **ForeFlight,** **May 2024 - August 2024,** *Austin, Texas*

- Developed scalable front-end and back-end production code, and wrote 100+ unit tests for Foreflight's iOS application.
- Established the "model" UI implementation and data access layer for over 50 developers using the sync team's API.
- Architected a robust internal data validation framework & implemented asynchronous networking infrastructure code.

Research Intern, **NASA,** **May 2022 - August 2022,** *Austin, Texas*

- Analyzed millions of real-world satellite data points & trained ML models in Python to forecast climate disasters.
- [Published research:](#) "Visualizing Two Decades of Climate Disaster Impacts...via Satellite Remote Sensing..."

Software Developer & Technician, **FRC Robotics,** **March 2022 - May 2023,** *Austin, Texas*

- Responsible for all autonomous software and sensors on robot. My work ranked 3rd in world for autonomous control.
- Utilized sensor fusion localization, computer vision, and PID control theory to accurately traverse variable terrain.

PROJECTS *(more listed on website)*

Multi-Agent Financial Analysis Tool, **LangChain, Agentic AI, Python, React,** **July 2025 - Present**

- Financial analyst agent built to scrape live data, perform calculations, and produce comprehensive data-driven reports.

Published iOS App – [Detailer](#), **Full Stack, Swift, System Design,** **May 2024 - Present**

- End-to-end development in Swift, JavaScript, and Python. 6000+ lines. Google Cloud backend & AI features. [Website](#)

LEADERSHIP/EXTRACURRICULAR

Director of Development, **Lavalab,** **February 2025 - Present**

- Led technical mentorship for Lavalab developer teams (14+ engineers), driving system architecture & design strategy.
- Directed a curriculum designed to equip developers with skills necessary to thrive in fast-paced startup environments.

Software Engineer & Driver, **USC Racing,** **August 2023 - Present**

- Led software development and supported integration of 1000+ electronic components across the electronics subsystem.
- Authored in-house ECU firmware in C and constructed a custom dashboard system in C++ utilizing CAN networking.
- *As driver:* Comprehensive knowledge of car and mental agility to perform in high-stakes environments.

AWARDS & CERTIFICATIONS

Bloomberg Puzzle Competition National Finalist and USC Winner

- Competed with other top-performing university puzzle teams in the BPuzzled national finals; flown to New York City.

Machine Learning Specialization *Stanford University, Coursera (Instructor: Andrew Ng)*

- Mastered linear/logistic regression, decision trees, neural networks, and coded fundamental algorithms from scratch.
- Implemented larger neural networks using TensorFlow and Keras libraries to solve complex real-world case problems.
